

**DCA — balanced internal test set (SUPPLEMENTARY)**  
**Treat-all baseline reflects 50% training prevalence — not real-world prevalence.**  
**Present as Supplementary Figure S1 only; not primary clinical analysis.**

*Note (N2): DCA on the balanced (50/50) internal test set uses a treat-all baseline computed at 50% prevalence. This makes the balanced-test DCA inapplicable as a clinical claim. Primary DCA is at natural prevalence (~14%). See [decision\\_curve\\_PRIMARY\\_natural\\_prevalence.pdf](#).*
